

Alternative Performance Measures (APM)/ Non-IFRS Financial Measures

Our Alternative Performance Measures (APMs) present useful information which supplements the financial statements. These measures are not defined under IFRS and may not be directly comparable with APMs for other companies. The APMs represent important measures for how management monitors the company and its business activity. The APMs are not intended to be a substitute for, or superior to, any IFRS measures of performance.

Some of the financial information presented in our quarterly reports contains APMs. These include Operational EBIT, Operational EBITDA, Operational Revenues, NIBD, ROCE, Underlying EPS, Operational EBIT % (Margin) and Covenant Equity Ratio. Below we define these APMs and reconcile them with IFRS measures.

Definitions of Alternative Performance Measures/ Non-IFRS Financial Measures

Operational EBIT and Operational EBITDA

Operational EBIT is a non-IFRS financial measure, calculated by excluding each of the following items from EBIT as set forth in our consolidated statement of income prepared in accordance with IFRS: change in unrealized internal margin, change in unrealized salmon derivatives (at Group level only), fair value uplift on harvested fish, fair value adjustment on biological assets, provision for onerous contracts, restructuring costs, income/loss from associated companies, sales tax in the Faroes, impairment losses, and other non-operational items (accrual for contingent liabilities and provisions). We exclude these items from our EBIT as we believe they affect the comparability of our operational performance from period to period, given their non-operational or non-recurring nature. Operational EBITDA is a non-IFRS financial measure, calculated by adding depreciation to Operational EBIT. Operational EBIT and Operational EBITDA are used by management, analysts, rating agencies and investors in assessing our performance. Accordingly, we believe that the presentation of Operational EBIT and Operational EBITDA provides useful information to investors. Our use of Operational EBIT and Operational EBITDA should not be viewed as an alternative to EBIT or to profit or loss for the year, which are measures calculated in accordance with IFRS. Operational EBIT and Operational EBITDA have limitations as analytical tools in comparison to EBIT or other profit and loss measures prepared in accordance with IFRS. Some of these limitations are: (i) these measures do not reflect the impact of earnings or charges that we consider not to be indicative of our on-going operations, (ii) these measures do not reflect interest and income tax expense; and (iii) other companies, including other companies in our industry, may calculate Operational EBIT and Operational EBITDA differently than we do, limiting their usefulness as comparative measures. Our Operational EBIT and Operational EBITDA at Group level and by country of origin are reconciled to EBIT below. Our Operational EBIT at segment level is reconciled in footnotes to our interim financial statements included in documents incorporated herein by reference.

Operational Revenue

Operational Revenue is a non-IFRS financial measure, calculated by including realized gain/loss from currency derivatives related to contract sales and excluding change in unrealized salmon derivatives and sales tax in the Faroes from revenue and other income as set forth in our consolidated statement of comprehensive income prepared in accordance with IFRS. We exclude change in unrealized salmon derivatives from our revenue and other income as we believe it affects the comparability of our operational performance from period to period, given its non-operational nature. Our use of Operational Revenue should not be viewed as an alternative to revenue and other income, which is a measure calculated in accordance with IFRS. Operational Revenue has limitations as an analytical tool in comparison to revenue. Some of these limitations include the fact that changes in unrealized salmon derivatives may need to be cash settled at a future date. Our Operational Revenue is reconciled to revenue and other income in footnotes to our interim financial statements included in documents incorporated herein by reference.

NIBD

NIBD as of the end of a period (for purposes of calculating average NIBD) is equal to our total non-current interest-bearing financial debt, minus our total cash, plus our current interest-bearing financial debt, plus net effect of currency derivatives on interest-bearing financial debt. Effects related to IFRS 16 (leasing) are excluded.

ROCE

ROCE is a non-IFRS financial measure, calculated by dividing Adjusted EBIT by average capital employed. Adjusted EBIT is calculated as EBIT, as set forth in our consolidated statement of comprehensive income prepared in accordance with IFRS, adjusted for fair value uplift on harvested fish, fair value adjustment on biological assets, provision for onerous contracts and other non-operational items (accrual for contingent liabilities and provisions). Average capital employed is calculated as average of the beginning of the period and end of the period capital employed except when there are material transactions during the year. Capital employed is the sum of net interest bearing debt, or NIBD, as of the end of the period plus equity as of the end of the period adjusted for fair value adjustment on biological assets, provision for onerous contracts and net assets held for sale. We use ROCE to measure the return on capital employed, regardless of whether the financing is through equity or debt. In our view, this measure provides useful information for both management and our investors about our performance during periods under evaluation. We believe that the presentation of ROCE provides useful information to investors because ROCE can be used to determine whether capital invested in us yields competitive returns. Our use of ROCE should not be viewed as an alternative to EBIT or to profit or loss for the year, which are measures calculated in accordance with IFRS or ratios based on these figures. The usefulness of ROCE is also inherently limited by the fact that it is a ratio and thus does not provide information as to the absolute amount of our income, debt or equity. It also excludes certain items from the calculation and other companies may use a similar measure but calculate it differently. A table setting forth our calculation of ROCE is set forth below.

Underlying EPS

Underlying Earnings per Share, or Underlying EPS, is a non-IFRS financial measure. We calculate Underlying EPS by dividing Adjusted Operational EBIT, calculated as Operational EBIT net of accrued payable interest (net), minority share of profit and tax expense calculated based on estimated tax rates, divided by the weighted average number of shares outstanding during the period. Effects related to IFRS16 (leasing) is excluded in the calculation. Management employs Underlying EPS to assess our operational performance, disregarding non-operational items like amortized interest, net currency effects and net other financial items with the exception of cash costs, and not reflecting permanent and temporary differences in the computation of taxes. We view Underlying EPS as a useful tool reflecting our operational performance per ordinary share outstanding. The usefulness of Underlying EPS is inherently limited. Some of these limitations are that Underlying EPS does not reflect the impact of earnings or charges that we consider not to be indicative of our on-going operations and Underlying EPS. A table setting forth our calculation of Underlying EPS is set forth below.

Operational EBIT % (Margin)

Operational EBIT % is a non-IFRS financial measure. We calculate Operational EBIT % by dividing Operational EBIT by Operational Revenue, each a non-IFRS financial measure. Management employs Operational EBIT % to assess operational performance of some of our segments, disregarding certain non-recurring and non-operational items, excluded from Operational EBIT and Operational Revenue. The usefulness of Operational EBIT % is inherently limited as further described in Operational EBIT and Operational Revenue paragraphs above. A table setting forth our calculation of Operational EBIT % is set forth below.

Covenant Equity Ratio

Covenant Equity Ratio is a non-IFRS financial measure. We calculate Covenant Equity Ratio by excluding effects related to IFRS 16 (leasing) from equity. A table setting forth our calculation of Covenant Equity % is set forth below.

Net Cash Flow per share

Net cash flow per share is a non-IFRS financial measure. We calculate Net cash flow per share as cash flow from operations and investments (capex), net financial items paid and realized currency effects - divided by the weighted average number of shares outstanding during the period. Effects related to IFRS 16 (leasing) are excluded.

Reconciliations

Operational EBITDA and EBIT

The following tables reconciles our Operational EBITDA and Operational EBIT to EBIT (financial EBIT according to IFRS) in EUR million for the Group and Operational EBIT to EBIT in EUR million for our Farming units for the three months ended September 30, 2020 and 2019, and the year ended December 31, 2019:
