Forward looking statements

This presentation may be deemed to include forward-looking statements, such as statements that relate to Mowi's contracted volumes, goals and strategies, including strategic focus areas, salmon prices, ability to increase or vary harvest volume, production capacity, expectations of the capacity of our fish feed plants, trends in the seafood industry, including industry supply outlook, exchange rate and interest rate hedging policies and fluctuations, dividend policy and guidance, asset base investments, capital expenditures and net working capital guidance, NIBD target, cash flow guidance and financing update, guidance on financial commitments and cost of debt and various other matters concerning Mowi's business and results. These statements speak of Mowi's plans, goals, targets, strategies, beliefs, and expectations, and refer to estimates or use similar terms. Actual results could differ materially from those indicated by these statements because the realization of those results is subject to many risks and uncertainties.

Mowi disclaims any continuing accuracy of the information provided in this presentation after today.

Highlights

- Significantly increased earnings on all-time high Q1 revenue driven by strong demand and reduced supply
- Q1 operational EBIT of EUR 207 million at record-high levels – almost doubled YoY
- Blended Farming cost of EUR 4.78/kg, up from EUR 4.62/kg in Q4 2021, on lower seasonal volumes and higher input prices
- Harvest volumes of 97k GWT in the quarter in line with volume guidance
- Consumer Products delivered another set of good results in the quarter considering the record-high raw material prices
- Good feed performance and production volumes in a low season
- Quarterly dividend of NOK 1.95 per share (NOK 1.44 ordinary and NOK 0.51 extraordinary)
 - 68% of underlying EPS

<i>Superior share</i>	<i>84%</i>	<i>89%</i>

- Record-high Q1 achieved prices and earnings for Norwegian origin
- Operational performance adversely impacted by winter sores
- In general, good production
- Costs expected to increase in the second quarter on lower volumes and less dilution of cost
 - Costs expected to drop again in the second half on higher volumes

Norway: Operational EBIT/kg per region

- Region North: Stands out yet again as margin winner on the lowest cost, however, issues with winter sores and a less favorable site mix YoY
- Region Mid: Margins impacted by low volumes. Production and seawater performance were good in the quarter
- Region West: Very low volumes where the lion's share of volumes were harvested in January on lower prices. Seawater production improved on good appetite
- Region South: Margins impacted by gill issues, winter sores and CMS

Norway: Sales contract portfolio

- Contracts on the low side in 2022 at 26%, equivalent to 70k GWT
- Contract share and contract prices in Q2-22 in line with Q1-22

New expansion projects in Farming Norway

New primary processing plant in Region Mid

- Decision taken for construction of a new primary processing plant at Jøsnøya, Hitra
- State-of-the-art facility to handle harvest volumes in Production Areas 6 and 7
 - To replace Ulvan factory, Frøya
- Annual production capacity of 100,000 tonnes
- Scheduled completion Q1 2024

Postsmolt expansion in Region West

- Further to the postsmolt investment programme in Norway, postsmolt expansion at Haukå (Production Area 4) decided
- Projects undertaken to date account for 41% of the postsmolt programme in Norway launched at our CMD 2021
- 40,000 GWT extra harvest volumes in Norway by 2027 all else being equal

Scotland

SALMON OF SCOTTISH ORIGIN		
EUR million	Q1 2022	Q1 2021
Operational EBIT	10.7	26.6

Superior share	97%	96%

- Earnings in absolute and relative terms in Scotland were down on almost halving of volumes and a high contract share
- Operational performance still adversely impacted by externally sourced eggs
 - This stock to be harvested out during Q2
- We expect significant improvements in the second half of the year

Chile

Operational EBIT Salmon of Chilean Origin Q1 2021 vs Q1 2022

- More than doubled earnings year-over-year on higher prices, though held back by relatively high contract share
- Yet another warm and dry summer in Chile has led to issues with low dissolved oxygen and algae
 - Mowi performed reasonably well although some elevated mortalities and sores

Canada

Mowi's stand at Seafood Expo Global 2022 in Barcelona, Spain

- A good quarterly result considering the record high raw material prices, by means of sound operational performance and raw material management
- Good volume development in light of reduced raw material availability
- Strong demand in the first quarter, partly driven by Easter and Lent
- Strong demand has continued into the second quarter

Mowi Ustka (Morpol) – extension of value chain

- Brand new factory opened in Poland to upcycle by-products from Mowi Ustka (Morpol)
 - Waste going into the circular economy to utilize 100% of the raw material
- End-products are oil and meal for use in human supplements, pet foods and aquafeed

- 2022 volume guidance of 460k GWT maintained – some regional changes
 - Scotland down by 5k GWT
 - Canada West up by 5k GWT

Outlook

- Strong market outlook and constrained supply side
 - Kontali projects 0% supply growth for the remainder of the year
- Mowi well positioned to capitalise on its integrated value chain and low contract share
- Unprecedented inflationary environment; so far soaring salmon prices have more than offset increasing input prices for the salmon
- Expecting salmon to continue to stand out versus other animal protein sources due to its substantially lower feed conversion rate, low energy use and superior sustainability credentials
- Mowi harvest volume guidance maintained at 460k GWT in 2022
- Quarterly dividend of NOK 1.95 per share in dividend (NOK 1.44 ordinary and NOK 0.51 extraordinary), payable in the second quarter
 - 68% of underlying EPS

Appendix

Mowi ranked #1 on sustainability amongst food producers

Good progress on reducing GHG emissions in 2021 and ambitious long-term targets

Scope 1 & 2 GHG emissions

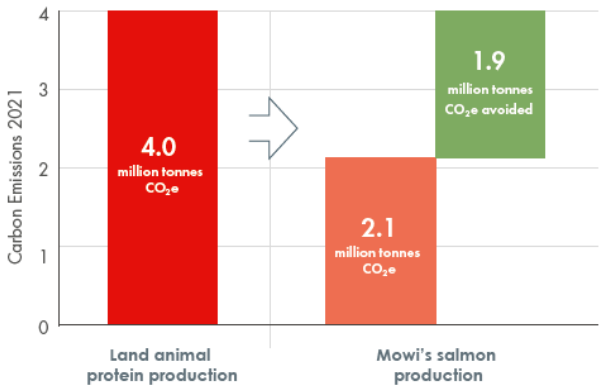

Scope 1 & 2 & 3 GHG emissions

GHG Emissions (FY 2021)

1.9 million tonnes CO₂e emissions are avoided annually by replacing the corresponding amount of land animal protein production.

Our sustainability achievements

98%

of harvest volumes are certified sustainable

100%⁽¹⁾

compliant with sustainable sourcing feed policy

95%⁽¹⁾

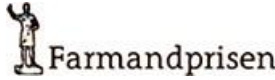

of our marine sites with minimum benthic impact

(1) 2021 data

Note: The carbon footprint used for land based animal production was calculated by starting to convert the production volumes of Mowi salmon in 2020 to edible yield (using a 55% conversion), then calculating the carbon footprint of that volume originating from animal protein mix. This was done by using a mix of consumption (OECD, 2019) of 40% chicken, 38% pork and 22% beef and the reported GHG emissions from SINTEF 2020. www.epa.gov/energy/greenhouse-gas-equivalencies-calculator was used to convert the net CO₂e emissions resulting from replacing land based protein by Mowi salmon, to number of cars that can be removed from the road every year

Ocean-based Atlantic salmon farming is on the right side of sustainability

Rating agencies	About the rating	Score ⁽¹⁾
 FAIRR A COLLIER INITIATIVE	Mowi ranked as the most sustainable animal protein producer in the world (amongst the largest 60 animal protein producers in the world) for three consecutive years	 1st place
 CDP DISCLOSURE INSIGHT ACTION	Mowi recognised as a global leader in climate action	 B
	Supplier Engagement Rating	 A
 World Benchmarking Alliance	Mowi ranked the second most sustainable seafood company (amongst the 30 largest seafood companies in the world)	 2nd place
 MSCI	ESG Rating, designed to measure a company's resilience to long-term, industry material environmental, social and governance (ESG) risks. Mowi is in the Leader category.	 AA
 SUSTAINALYTICS	ESG Rating, assessing financially material Environmental, Social and Governance (ESG) data	Medium-Risk
 Farmandprisen	Mowi awarded with the best annual report in Norway three times in the last five years.	 2nd place

1) Scores based on most recent ratings

2) The figure reflects total water footprint for farmed salmonid fillets in Scotland, in relation to weight and content of calories, protein and fat.

Blue Food Assessment (Environmental performance of blue foods, Gephart et al., 2021) reported GHG emissions for farmed salmon of 5.1 kg CO2/kg edible weight and 8.4 kg CO2/kg edible weight for chicken.

Mekonnen, M.M. and Hoekstra, A.Y. (2010) The green, blue and grey water footprint of farm animals and animal products. SARF (2014) Scottish Aquaculture's Utilisation of Environmental Resources

«Blue foods on average have much greater nutritional benefits than terrestrial foods. Many blue foods also have a smaller environmental footprint.»

«Farmed salmon...performed similarly or better than chicken – often considered the most efficient terrestrial animal across the considered environmental stressors.»

Dividend policy

- Mowi's ambition is to create long-term value for the shareholder through both positive share price development and a growing dividend in line with long-term earnings
 - Quarterly ordinary dividend shall under normal circumstances be at least 50% of underlying earnings per share (EPS)
 - Excess capital will be paid out as extraordinary dividends
- When deciding excess capital the Board of Directors will take into consideration expected cash flow, capital expenditure plans, financing requirements and appropriate financial flexibility. Further to this a long-term target level for net interest-bearing debt is determined, reviewed and updated on a regular basis
- Shareholder returns are distributed primarily as cash dividends with the option of using share buybacks as a complementary supplement on an ad-hoc basis
