

ASC Salmon Standard

Indicator 3.4.3: Estimated unexplained loss of farmed salmon is made publicly available.

Requirement: Yes

Applicability: All

Inventory difference at Shelter Pass for the 2016YC was -2.89% (-45 919 pieces), which is outside of the counting error of $\pm 2\%$. The inventory difference was due to larger than normal sized fish shipped into Doyle Island and Hardwicke Island, causing some double counting of fish as well as under-estimation of mortality during smolt mouth myxobacterial treatments. When inventory for the three sites is reconciled, the total inventory difference is -0.88% (-7 418 fish), within the counting error. There was no suspected or actual escape at Shelter Pass.
